## My Preferences

In the personal menu of the FrogBar, in the top-right corner, there is an option for My Preferences.

This link opens the My Preferences application and allows you to configure how Frog interacts with you.

You can change passwords in the **Change Password** section and if you add an email address to the **Email Addresses** section, Frog can email alerts to you.

Add your email address into the box and click Add.

Frog will send a verification link to that email – check your inbox and spam folder for it.

Once verified, you can use the Notifications section to select which type of notifications you want to receive without having to log into Frog.  Just make sure to click the save button at the bottom of the screen.  This section is not linked to the notifications you can receive on your phone via the MyFrog apps available for both Android and iPhone.
