

Random Name

The Random Name Selector is a simple widget which has a big impact. Once you have added your widget to a site, you can then search for a group you want to use and then click randomise.

As a way of preventing students from hiding during class questions by not calling for hands to be raised, the widget demonstrates to students that their selection is random and that they have to engage with the teacher.

Any group in Frog can be selected, which makes the widget viable for prize draws and raffles. Groups can be added directly in the Groups and Policies app, so it would be very easy to create a new draw for 100% attendance, for example.
