Behaviour Summary

The Behaviour Summary widget allows a user to see the behaviour summary for a student.

A member of the staff profile can use this widget to see the behaviour data of any pupil at the school.

A parent user can use this widget to view the behaviour data of their children and a student user can use this widget to see their own behaviour data.

As an administrator, you will need to add the Select User and Select Date widgets in order to look at an individual's behaviour summary during a specific date range.

In the widget settings, admins can set the widget to show all behaviour or only show positive or negative behaviour using this dropdown menu.

There is also the ability to choose to display the name of the teacher or not and the option to display the description of the behaviour information.
